for additional information  
on our Tooth Positioner service.

Orthodontists have long understood the benefits of using a Tooth Positioner for superior finishing and detailing. Specialty is pleased to now offer a complete line of Positioners with Standard and Gnathological Set-Ups and your choice of clear Vinyl or Silicone Positioner materials.

### **Specialty Positioner Set-Ups**

We offer a choice of standard “Bench Set-Ups” or we can work with any articulator of your choice such as the SAM or Panadent systems. You have the option of sending upper and lower mounted models or we will cross mount the lower to your mounted upper cast.

### **Specialty Positioner Materials**

We offer 2 outstanding Positioner materials - Clear soft and medium vinyl and medium flex Silicone. The vinyl material has set the standard in Positioners for years. Our silicone material is flexible for patient comfort yet extremely tear-resistant for a long lasting appliance.

As an added benefit to your schedule, Specialty can receive your Positioner models (or scans) with the fixed appliances still on the teeth. We will remove the brackets from the working models in the lab which allows you to schedule the patient for debonding and Positioner delivery in the same appointment.

### **Digital Precision**

As with all appliances fabricated at Specialty, Tooth Positioners can be made from your digital scans, or we can digitize your stone models. We then use industry leading software to determine optimum occlusion for the reset and construction bite.
