

Functionals

Models/Scans: Upper and lower models poured in Class I or Class II stone (models). Complete anterior and posterior anatomy of **both arches** as most Functional appliances require articulation or involve occlusal acrylic.

Wax Bites: Wax bites should reflect exact A-P, transverse and vertical dimension to be built into the final appliance. Digital bites can be sent as well.

Notes: The backs of the models should be trimmed to the wax construction bite. Remember that acrylic colors can be used for Functional Appliances too.
