

Choose Indirect Bonding with Specialty

Save time and enhance precision of bracket placement with Specialty's Indirect Bonding process. Over 25 years of experience has led to advances in bracket placement equipment, specialized adhesive systems and transparent transfer trays...all leading to maximum efficiency and consistency in clinical delivery.

We accept STL digital files!

Benefits of Indirect Bonding with Specialty

Specialty's Indirect service can be used with any manufacturer's brackets. As an added service we can stock and reorder them to help reduce inventory in your practice.

We build and maintain your personalized "special instructions" for individualized bracket placement and transfer tray preferences.

All brackets are placed with the custom base technique for a precision fit and a consistent clinical result.

Using the two-tray system, you can use the adhesive of your choice while typically completing the bonding in under one hour.

Digital Indirect Bonding

Well over 50% of our IB customers now submit digital files for their cases.

The advantages with digital files include faster turnaround time and improved accuracy as impressions and model pour-ups are eliminated.

Indirect Bonding Clinical Bonding Technique

Specialty is always looking for ways to add value to our customers with clinical support. We highly recommend viewing the video featuring Dr. Bob Waugh demonstrating his Indirect Bonding technique. For the video, as well as a complete description of our Indirect Bonding services please visit our website at www.specialtyappliances.com.
