

Indirect Bonding

Models/Scans: Upper and lower models poured in Class I or Class II stone (models). Complete anterior and posterior anatomy of each arch for which an IDB tray is requested.

Wax Bites: Necessary only if centric occlusion is not obvious when articulating models.

Notes: If digital bracket placement is desired, please contact Specialty Appliances to provide manufacturer bracket part numbers. Once you've provided a specific bracket set's part numbers, there is no need to send that information for each additional case using those brackets, however always provide the name of the brackets being used.
